

Inverse problems A

We can write out sums in different ways in order to check them. For example:

$$18 + 12 = 30$$

could be checked by using the sums:

$$12 + 18 =$$

$$10 + 10 + 2 + 8 =$$

$$30 - 12 =$$

Work out the following sums and then rewrite them to check if your answers are correct.

1) $13 + 17$

9) $12 + 33$

2) $14 + 16$

10) $32 - 11$

3) $11 + 9$

11) $12 + 59$

4) $6 + 3 + 13$

12) $12 + 18 + 20$

5) $21 + 5$

13) 10×3

6) $24 - 7$

14) $40 + 36$

7) $32 - 9$

15) 35×2

8) $23 + 14$

16) 23×2
