

# Number Challenge

You may use the digits 1,2,3 and 4

You must create a mathematical statement using any maths functions that you know to equal all the whole numbers to 40 in turn. You may combine the digits, but cannot use them more than once for each question. You might have to use brackets to make sure the numbers are done in the correct sequence.

$$1=$$

$$2=4-3+2-1$$

$$3=$$

$$4=4-2+3-1$$

$$5=$$

$$6=$$

$$7=24/3-1$$

$$8=$$

$$9=$$

$$10=1+2+3+4$$
