

Plant Plumbing Investigation

We put some white carnations in coloured water to see what would happen. We made sure it was a fair test by making sure the stems of the carnations were the same length and we used the same amount of water and colour for each flower. We left them all in the same place to keep the light and temperature conditions the same.

My prediction – what I think will happen and why:

The results of my investigation:

Red and blue water

Red water

Blue water

Clear water

I got this result because:
