

BODY ORGANS

Your body contains important organs which do special jobs to keep it working.

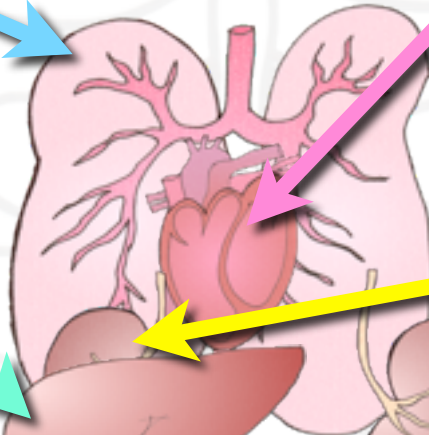

Brain

The brain controls your whole body by sending messages.

Lungs

Your lungs take oxygen from the air into the blood and get rid of carbon dioxide.

Heart

Your heart pumps blood around your body.

Liver

Your liver stores and controls chemicals

Kidneys

The kidneys clean the blood and make urine which is stored in your bladder.

Digestive System

This breaks down food and passes the goodness into the bloodstream. It also gets rid of anything that cannot be used.
