

Co-ordinates

Remember to go
'ALONG the corridor
(along the x-axis)
then UP the stairs
(up the y-axis)
when reading co-ordinates!

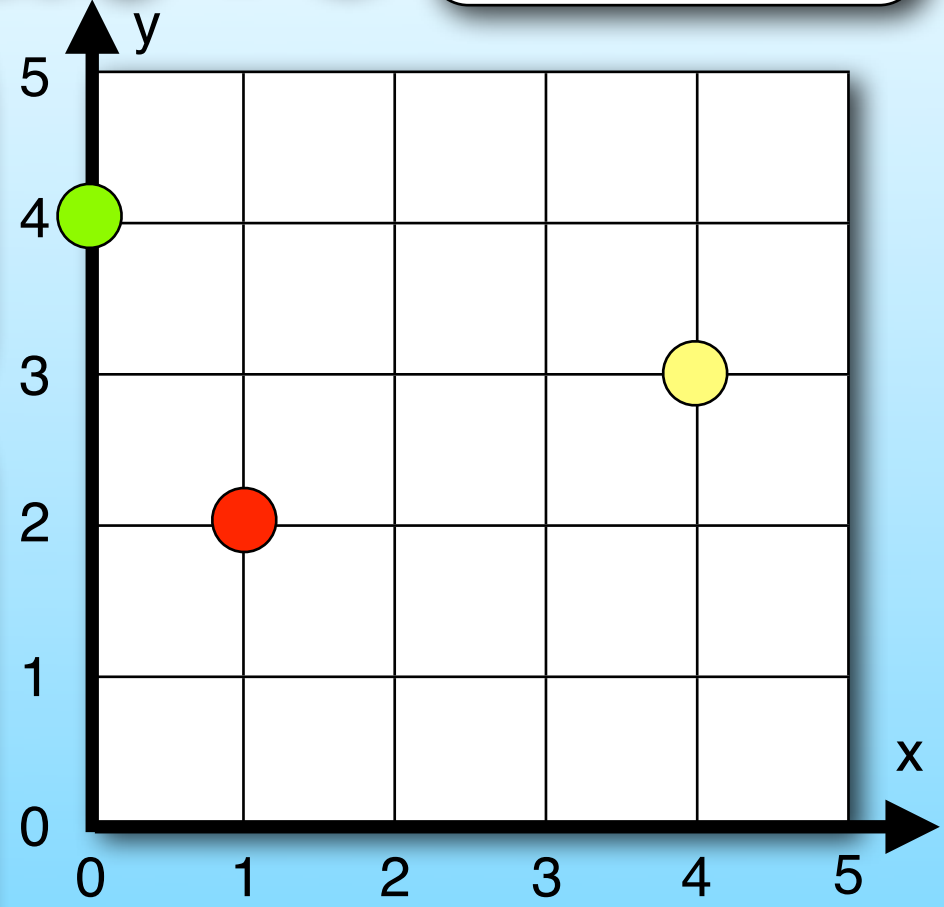

Co-ordinates are letters or numbers that help us to find the position of something.

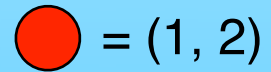

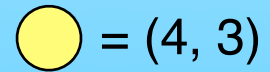

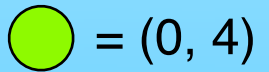

You can often see them on maps, charts and graphs.

This grid has two axes, one horizontal (x) and one vertical (y).

Look at the **red** circle. It is one square along and two squares up. We call this (1, 2).

Remember to always write the x-axis co-ordinate first.

 = (1, 2)  = (4, 3)  = (0, 4)
