

Use Strong Passwords!

Passwords are used to prove (to a computer or website) that you are the right person.

It is important to **use STRONG passwords** so that other people can't use your account.

If someone guesses your password, they could pretend to be you, send nasty messages (that might get you into trouble) and even steal things from you.

Make sure that your passwords are **secret** and **strong**!

Strong

Weak

Can you sort these passwords to show how strong or weak they are?
